

ZEESHAN SALEEM

Backend Engineer | Node.js • TypeScript • Express.js • MongoDB • PostgreSQL • Docker • AWS • Redis
Faisalabad, Pakistan • codewithzezo@gmail.com • github.com/codewithzezo • linkedin.com/in/zeeshan-saleem • Open to Remote

SUMMARY

Self-driven Backend Engineer with a proven ability to write clean, scalable Node.js and TypeScript code — demonstrated through two independently built, production-grade projects covering identity systems, real-time pipelines, and cloud deployment on AWS. Currently pursuing a Software Engineering degree (CGPA 3.45/4.0) and actively seeking a backend internship at a tech-product or remote-first company where I can contribute from day one.

TECHNICAL SKILLS

Core Languages: Node.js, TypeScript, JavaScript (ES2022+)

APIs & Auth: RESTful APIs, WebSockets, Socket.io, JWT, OAuth 2.0, Rate Limiting

Databases: MongoDB, PostgreSQL, MySQL, Redis, TimescaleDB

Patterns: RBAC, Multi-Tenancy, MVC, Event-Driven Design, Microservices

DevOps & Cloud: Docker, AWS (EC2, S3, Auto Scaling), GitHub Actions, CI/CD

PROJECTS

User Management System (Clerk-inspired)

2025 – live

Production-ready backend identity platform — authentication, sessions, multi-tenancy, and permissions with enterprise-grade rigour.

- Architected RBAC with fine-grained, per-organization permissions and full multi-tenant data isolation, ensuring zero cross-tenant data leakage
- Engineered JWT auth with refresh-token rotation, bcrypt hashing, and server-side revocation — closing common session-hijacking vulnerabilities
- Built email verification, password-reset, and account-lockout as isolated TypeScript modules with clean interfaces and no business-logic leakage
- Integrated Redis for distributed session caching and sliding-window rate limiting, reducing DB load
- Containerised with Docker and deployed to AWS via CI/CD — push-to-main triggers automated test, build, and deploy

Stack: Node.js · TypeScript · Express.js · MongoDB · JWT · Redis · Docker · AWS github.com/CodeWithZezo/mega-project

Real-Time Analytics Engine

2024 – In-Progress

High-throughput data pipeline that ingests, processes, and serves live metrics at scale.

- Scaled Socket.io to 5,000+ concurrent WebSocket connections with authenticated handshakes and connection pooling
- Built Node.js stream processor handling 50,000 data points/sec with backpressure control to prevent memory overflow
- Deployed on AWS Auto Scaling Groups — instances scale automatically under traffic spikes, keeping latency flat

Stack: Node.js · Socket.io · TimescaleDB · Redis · RabbitMQ · Docker · AWS

EDUCATION

Bachelor of Software Engineering

2024 – 2028

Arid Agriculture University, Faisalabad, Pakistan • **CGPA: 3.45 / 4.0**

Relevant Coursework: Data Structures, Algorithms, Database Systems, Software Architecture
