

# Zeeshan Saleem

Backend Engineer Intern Candidate | Node.js • TypeScript • Express.js • MongoDB • PostgreSQL • Docker • AWS • Redis  
Faisalabad, Pakistan • codewithzezo@gmail.com • github.com/codewithzezo • linkedin.com/in/zeeshan-shami-2a7000379 • Open to Remote

## SUMMARY

Self-driven Backend Engineer with a proven ability to write clean, scalable Node.js and TypeScript code — demonstrated through two independently built, production-grade projects covering identity systems, real-time pipelines, and cloud deployment on AWS. Currently pursuing a Software Engineering degree (CGPA 3.45/4.0) and actively seeking a backend internship at a tech-product or remote-first company where I can contribute from day one.

## TECHNICAL SKILLS

- Core:** Node.js, Express.js, TypeScript, JavaScript (ES2022+)
- Databases:** MongoDB, PostgreSQL, MySQL, Redis, TimescaleDB
- DevOps:** Docker, AWS (EC2, S3, Auto Scaling), Git, GitHub Actions, CI/CD
- APIs:** RESTful APIs, WebSockets, Socket.io, JWT, OAuth 2.0, Rate Limiting
- Patterns:** RBAC, Multi-Tenancy, MVC, Event-Driven Design, Microservices Principles

## PROJECTS

User Management System (Clerk-inspired)

2024 – Present

- Production-ready backend identity platform — handles authentication, sessions, multi-tenancy, and permissions with enterprise-grade rigour.
- Architected RBAC with fine-grained, per-organization permissions and full multi-tenant data isolation, ensuring zero cross-tenant data leakage
  - Engineered JWT auth with refresh-token rotation, bcrypt hashing, and server-side revocation — closing common session-hijacking vulnerabilities
  - Built email verification, password-reset, and account-logout as isolated TypeScript modules with clean interfaces and no business-logic leakage
  - Integrated Redis for distributed session caching and sliding-window rate limiting, reducing DB load
  - Containerised with Docker and deployed to AWS via CI/CD — push-to-main triggers automated test, build, and deploy
- Stack: Node.js • TypeScript • Express.js • MongoDB • JWT • Redis • Docker • AWS | github.com/CodeWithZezo/mega-project

Real-Time Analytics Engine

2024 – Present

- High-throughput data pipeline that ingests, processes, and serves live metrics at scale.
- Scaled Socket.io to 5,000+ concurrent WebSocket connections with authenticated handshakes and connection pooling
  - Built Node.js stream processor handling 50,000 data points/sec with backpressure control to prevent memory overflow
  - Deployed on AWS Auto Scaling Groups — instances scale automatically under traffic spikes, keeping latency flat
- Stack: Node.js • Socket.io • TimescaleDB • Redis • RabbitMQ • Docker • AWS | github.com/zeeshansaleem

## EDUCATION

Bachelor of Software Engineering

2024 – 2028

Arid Agriculture University, Faisalabad, Pakistan • CGPA 3.45 / 4.0 • Relevant: Data Structures, Algorithms, Database Systems, Software Architecture

Available immediately for remote or on-site backend internships • English (Professional) • Urdu (Native) • References available on request
